

INSECT-A-SHIELD

KILL THE INSECTS - NOT YOUR FAMILY!

Insect-A-Shield is an alternative to the standard insecticides that are used today. It is a product that is largely made up of diatomaceous earth. Therefore completely harmless to human and animal life. Added to this diatomaceous earth are Pyrethrum which is one of man's oldest natural insecticides and highly lethal to insects. It comes from chrysanthemum flowers located in Kenya and Ecuador and is a digestible vegetable extract of the flower. Piperonyl butoxide is another vegetable extract that is an insecticide in its own right. It is added to Insect-A-Shield to greater enhance the Pyrethrum and make it more effective. Together, these three ingredients help make Insect-A-Shield an almost all-purpose insecticide.

Why use Insect-A-Shield insecticides?

Because of the widespread use of conventional chemical insecticides, especially in the agricultural industry, and the other chemicals that are being introduced into our earth on a daily basis, there has developed a great problem of contamination to our water and plant life. Insect-A-Shield is a safe alternative to these chemicals while doing a better job at removing insects of many varieties. After all, we are responsible for what we put into our planet. Shouldn't we use something safe and natural for all rather than destroying our planet any further? Insect-A-Shield is the natural choice and safe alternative to insect control.

Product Information

Insect-A-Shield comes in seven varieties. Below are listed the varieties and their applications. Insect-A-Shield comes in a 5 oz. puffer bottle, a 1lb., 10lb., and 30lb. bags. Pallet quantities can be arranged for larger orders.
